

SENIOR INFRASTRUCTURE ARCHITECT

OUR TECHNICAL ENVIRONMENT:

Our Engineering Team is now growing consisting of Senior Software Developers, DevSecOps Engineers, Data engineers/Scientist, Architects and Designers who are responsible for the end-to-end ownership of our platform, from architecture through to infrastructure. Individually they are all exceptional at what they do, but by working collaboratively within a team, consistently applying best-practice and automating absolutely everything they are able to build world-class software for our customers. This is a completely greenfield project, a fully funded cutting edge start-up that will require you to muck in with every aspect of our delivery lifecycle. Sometimes you might be working closely with the engineering teams, other times with the PO's and other times with external parties defining integration mechanisms. We are an environment that always aims to find the change that fuels our growth. We also like to have a laugh - banter is a requirement!

THE TOOLS WE USE:

It's very much a "best tool for the job" mentality at the Digital Challenger Bank and our tech-stack is continually evolving but to give you a flavor of what we're currently working with here are some of the tools we use;

Languages: Go, Java (Spring Boot), Scala, .net Core, Python, SQL, CQL

Tools: Kubernetes, Terraform, Docker, Vault, Consul, ELK, Prometheus, Grafana, Firebase

Data Integration, Engineering & Data management: KAFKA Event Bus, ksqldb, Flink, Nifi, Spark, Hadoop, Cassandra, SAS Data Management Platform, SAS BI & Analytical Platform

Methodologies: Agile, Scrum, Kanban, TDD, BDD, Pair-Programming

WE'RE LOOKING FOR A *SENIOR INFRASTRUCTURE ARCHITECT*:

Who will,

- Be responsible for the infrastructure architecture function within EA office
- Define and advocate cloud architecture vision, strategy and architecture of IaaS, PaaS, and SaaS cloud services across the platform

- Analyze, design, and develop roadmaps and implementation plans based upon a current vs future state in a cohesive architecture viewpoint, including detecting critical deficiencies and recommending solutions for improvement
- Maintain overall industry knowledge on latest trends, technology, etc. and demonstrate forward thinking around how technology can support where the organization is going
- Be a hands-on leader to continuously improve and evolve the design, security, performance/scalability and operational efficiency that would enable the delivery of the platform
- Provide guidance to infrastructure and development teams for the design, implementation and support of cloud platform architecture and automation technologies
- Collaborate with engineering and product teams across the organization to build complete cloud offerings
- Perform ongoing architecture quality review activities and analyzes the current architecture to identify weaknesses and develop opportunities for improvements
- Review product work, including detailed code, from other team members for approval to deploy; provide technical feedback as needed
- Provide technical expertise and ownership in the diagnosis and resolution of an issue, including the determination and provision of workaround solution or escalation to service owners
- Create and maintain documentation of architecture solutions, such as reference architectures, implementation diagrams, etc. and relevant systems, procedures and processes
- Design Disaster Recovery and backup strategies to meet the objectives
- Other duties as assigned

THE SKILLS WE'RE LOOKING FOR:

- Good consultative, communication, team player and analytical skills are a must, as you will be regularly interacting between various teams which are distributed across continents
- Ability to clearly communicate verbally and in writing to business and technology leaders, architects, developers, and team members
- Possess deep technical knowledge and extensive experience with complex, IT environments including applications, middleware, storage, networks, information security, and operations as well as have a solid understand of cloud services, cloud native architectures and application delivery models

- Experience with architecting, implementing and maintaining highly available mission critical environments for 24x7 availability
- Demonstrate ability to support cloud architecture recommendations and decisions with research and reasoning
- Proven track record of cloud implementations with deep understanding of public cloud infrastructure concepts
- Strong hands-on experience scripting/development skills in Python, Ruby, Go, Java, JavaScript, etc. in a corporate environment
- Hands-on experience with container tools such as Docker, Kubernetes, Helm and configuration management tools such as Terraform, Puppet, Chef, or Ansible
- Experience in Enterprise Architecture capabilities and contributed in Architecture framework, process, governance, principles
- In depth knowledge and understanding of container and microservices technologies and related architectures
- Experience designing event-based and streaming solutions
- Solid understanding of security practices through all phases of the application development life cycle.
- Experience working in a financial services or highly regulated environment preferred
- 10+ years of experience in Infrastructure domain with minimum 5 years in Cloud technologies including IaaS, PaaS, and SaaS
- Oracle Cloud Infrastructure certification is desired; Relevant industry certifications such as AWS, Microsoft Azure or Google Cloud are a plus
